

# Biometric Diagnosis in Dentistry

For every dentist that changes mandibular position

(restorative dentistry, orthodontics, CAD/CAM, snoring/sleep, TMD and Implants)

It is critical that you know the impact those changes have on TMJ, craniofacial muscles and the new occlusion you've created!

The **Biometric Diagnosis in Dentistry** course will provide you with a detailed understanding of the technology available to make evidence based diagnosis. No longer will you need to undertake complex procedures without the information for appropriate treatment planning. You can be confident of the prognosis, making your dentistry predictable.

**Dr Kirk Blanchard** is an expert in the interpretation of Joint Vibration Analysis, EMG, Jaw Tracking and T-Scan. His course is excellent for jump starting the beginner to computerised biometric analysis, or as a fast paced refresher for the long time BioPAK/T-Scan user. You will learn all the latest features such as 3D jaw tracking views, automated EMG analysis, report generation and systems customisation. Each session will focus on a different diagnostic aid and sample traces will be available for you to download so you can follow along as Dr. Blanchard works through each trace.

You will understand how to use the available technology to screen general patients and provide evidence for "Total Care" dentistry. **Increase case acceptance** for mandatory, elective and cosmetic procedures.

**Dr Kirk Blanchard**

Internationally renowned speaker on TMJ, Occlusion and CAD/CAM dentistry, Dr Blanchard is known as "The Admiral" to Dental Town subscribers. His insightful and practical style brings computerised dentistry to life.

**Thursday 18th  
& Friday 19th  
December 2008**
